## BROOKLAND

SAND & AGGREGATES LTD

In the heart of Cornwall's "White Mountains", Brookland Sand & Aggregates Ltd is working with Imerys Minerals at Littlejohns pit near St Austell to produce sustainably sourced sands and aggregates from granite.

At Brookland our passion is taking pride in supplying quality products with a personal service and to utilise innovative processing techniques. This allows for a wide range of products to satisfy all construction needs.

We produce all our products to British Standards Specification and also to the Ministry of Transport's Specification for Highway Works.

### OUR HISTORY

Brookland Sand & Aggregates Ltd is an independent business founded by the Cleave family. In 2010 at Gunheath Pit, Barry Cleave started the business with his son Marshall crushing granite to produce aggregates for construction. Now run by Marshall at Littlejohns pit, the family's drive and hard work continues with production of the "St Austell grey granite" transforming our environment and lives.

With continued focus on product quality and customer service the company has seen steady growth. In order to satisfy customer requirements and serve projects in the South-West and beyond Brookland relocated to Littlejohns pit in January 2014.

### LITTLEJOHNS PIT

With access to more the 30 million tonnes of a sustainable source of granite stent and further investment for innovative processing methods, Brookland remains committed to the long term production and supply of quality products.

Our parent company Norman Cleave Plant Hire was started in 1972 by Norman who built up a fleet of earth moving equipment. These machines helped to construct many of the motorways and roads throughout the country that we use today. In the mid ninties the company started to diversify into aggregate processing. NCPH was the main contractor at the Gunheath site for many years and has vast experience in processing and producing high quality granite aggregates. NCPH is still the principal contractor at Littlejohns pit and through a wealth of knowledge and state of the art plant equipment maintains production to exacting standards. With our experienced team of technicians and machine operators aggregate processing continues to be the company's main interest.

## TRANSPORTATION

Cornwall and the rest of the UK. With the ports of Fowey and Falmouth within easy reach the possibilities of shipping via sea are endless.

Transport by rail is also an option with a rail head only a few miles from our processing facility.

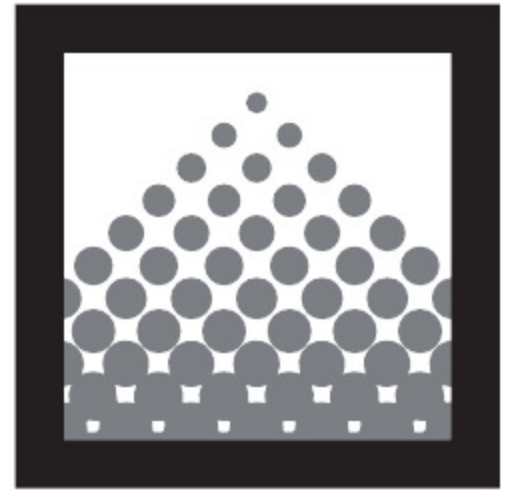

# ARMOUR ROCK

Granite Boulders from 300mm upwards

75-100mm Gabion stone

100-200mm Gabion stone

**BROOKLAND**  
SAND & AGGREGATES LTD

# ARMOUR ROCK

All our materials are compliant to British Standards and to the Ministry of transports Specification for Highway Works.

We have our own testing facility on site and can supply you with data sheets and gradings on request.
